

Fronius UP.storage information for Installers

With the Fronius UP.storage software upgrade, any Fronius GEN24 can become the hybrid inverter Fronius GEN24 Plus.

If PV system owners wish to integrate a battery storage into their PV system at a later date, you can easily purchase and install Fronius UP.storage for them. This activates the battery connectivity as well as the Full Backup power option.

Obtaining a license is easy, just follow these simple steps.

Install the Fronius GEN24 device, ensuring that the inverter and PV system are registered on Fronius Solar.web.

Once the device has been registered, you can then purchase the license upgrade on behalf of the system owner. Simply send the device serial number and purchase order, via email, to our sales team at pv-sales-uk@fronius.com to obtain the license.

Once the order for the upgrade license has been processed, the Fronius UP status will be displayed in Solar.web within a few minutes.

Post license upgrade information

If the inverter is online, the license will import automatically.

If the inverter is offline, you can download the license and import it manually via the WebUI of the GEN24 inverter.

Fronius recommends installers perform the upgrade simultaneously with the installation of the battery at the customer's location.
